## Final Environmental Impact Statement

US-95 Thorncreek Road to Moscow

Project No. DHP-NH-4110(156);Key No 09294

## **US-95 Thorncreek Road to Moscow Project No. DHP-NH-4110(156) Hazardous Materials Scan**

The following is a summary of the hazardous materials scan conducted by North, Wind Inc. as part of the US-95 Thorncreek Road to Moscow Draft Environmental Impact Statement. This scan was completed using several resources including driving and walking the corridor, reviewing aerial photographs, searching the National Response Center Public Report Database (NRC 2005), the Idaho Department of Environmental Quality (DEQ) and Environmental Protection Agency (EPA) databases, the Idaho State Police Community and Drug Information website, contacting personnel at the Latah County Solid Waste Department, and interviewing DEQ and Idaho Transportation Department (ITD) representatives in Lewiston regarding previous spills or releases (Mann, pers. comm., 2005; Toddhunter, pers. com., 2005).

The area investigated starts approximately one half mile south of Thorncreek Road and extends north to Palouse River Road on the south edge of the City of Moscow in Latah County. The western limit of the area is bounded by the Washington State line and the eastern limit is just east of Paradise Ridge Road.

Latah County is located on the eastern edge of the Columbia River Plateau and the western slope of the Rocky Mountains. A fault, known as the Cottonwood Creek fault, runs from the eastern edge of the Paradise Ridge crescent in a southeasterly direction crossing both the Potlatch and Clearwater Rivers (Idaho Geologic Survey 2005).

Two basalt aquifer systems supply groundwater in the project area. The Grande Ronde and Wanapum aquifers are part of the Columbia River Basalt Group, created by thousands of feet of lava flows that cover most of eastern Washington. The general direction of water movement in the Grande Ronde Basalt is toward the Snake and Columbia Rivers. The Grande Ronde aquifer water levels have been steadily declining indicating very little recharge. The shallower Wanapum (Priest Rapids) aquifer responds to changes in precipitation and pumping, indicating the aquifer may be recharged from the surface (Palouse Water Conservation Network 2005).

The ITD Design Manual Section A6 states that hazardous materials and waste include all of the identified materials contained in the following regulations or requirements:

- U.S. EPA's Listed Wastes in *40 CFR, Part 261*
- U.S. EPA's Characteristic Waste as defined in *40 CFR, Part 261.21-24*
- A mixture of a solid waste/listed waste
- A material derived from a listed waste
- Materials listed as Hazardous Materials in *49 CFR, Parts 171 and 172*
- Asbestos in Structures in *40 CFR, Parts 61 and 763*
- Polychlorinated Biphenyls (PCBs) in *40 CFR, Part 761*
- Chlorinated Fluorocarbon Compounds (also known as alkanes) in *40 CFR, Part 762*
- Priority Pollutants List in *40 CFR, Part 122*
- Dioxins in *40 CFR, Part 775*

- List of hazardous substances in *40 CFR, Part 302*
- Appendix IX List in *40 CFR, Part 264*
- Extremely Hazardous Substances in *40 CFR, Part 355*

Prior to the field investigation a database search was conducted for the project area. The DEQ underground storage tank (UST) and leaky underground storage tank (LUST) database was reviewed (IDEQ 2005a, 2005b) as well as the EPA database for Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Superfund sites and Resource Conservation and Recovery Act (RCRA) sites (USEPA 2005a, 2005b). Other items reviewed on the EPA database included water dischargers, hazardous waste sites, toxic releases, and air emissions sites. The Idaho State Police website for Region 2 was also accessed to identify known hazardous materials sites, such as methamphetamine (meth) labs or meth production by-products dump sites.

To identify potential occurrences of hazardous materials, a hazardous materials field scan was performed on the project area on March 1 and 2 in 2005. The area that was scanned started approximately one half mile south of Thorncreek Road and extended north to Palouse River Road. The west and east extents of the scan area were the Washington State line and just east of Paradise Ridge Road. Locations within the project area that potentially contained hazardous material were identified and marked on aerial photographs. The predominant hazardous materials observed were propane tanks and aboveground storage tanks (ASTs) for petroleum products (see Table 1). Due to the age of many of the existing structures, the historic use of lead-based paints, and the variety of asbestos containing products produced between the 1940s and the mid 1970s, there is the potential risk of lead-based paint and asbestos containing structures that may be demolished in association with the project.

Lead-based paint was determined to be a hazardous material in the early 1970s. In January 1971 the Lead-based Paint Poisoning Prevention Act was passed. The vast majority of homes built before 1950 contained substantial amounts of lead-based paint (Residential Lead-based Paint Hazard Reduction Act of 1992).

The Clean Air Act (CAA) of 1970 requires EPA to develop and enforce regulations to protect the general public from exposure to airborne contaminants that are known to be hazardous to human health. In accordance with Section 112 of the CAA, EPA established National Emission Standards for Hazardous Air Pollutants (NESHAP). Asbestos was one of the first hazardous air pollutants regulated under Section 112. On March 31, 1971, EPA identified asbestos as a hazardous pollutant, and on April 6, 1973, EPA promulgated the Asbestos NESHAP in 40 CFR Part 61, Subpart M (EPA 2005).

## RESULTS

The National Response Center public database listed no toxic releases, water discharges, or hazardous waste sites for the project area. There were no sites listed for CERCLA or RCRA. DEQ and ITD had no recorded incidences of any spills or releases.

During the hazardous materials scan of the project area a total of 17 properties were found to contain ASTs assumed to contain petroleum products such as gasoline, heating oil, or diesel fuel (Table 1). The majority of the ASTs were approximately 200 to 500 gallons tanks. Four sites were observed to contain USTs (Table 1). One of these sites appeared on the DEQ UST list as containing five tanks (unleaded gasoline and diesel fuel). The other three sites were not listed by DEQ. Two of these sites were located on Thorncreek Road on the southern end of the project scan area. Old gas pumps were visible and may still be connected to USTs. The other site was located on US-95 and probably contains one tank used for diesel fuel. Thirty-four homes were observed to have an above-ground propane tank on the property (Table 1). These ranged in size from 200 gallon to 500 gallon tanks.

There was an abandoned tank observed along Jacksha Road in the borrow ditch. This tank was estimated to be a 1,000 gallon tank and is currently used to hold water from a spring. Four locations in the project scan area had 55 gallon drums on the property, contents unknown.

Three sites had numerous abandoned cars. One location on US-95 is currently used as an automotive repair shop. These sites have the potential for the presence of petroleum products, stained soils, and leaky car batteries. One business within the project area services air conditioners and is anticipated to have Freon and other gasses that pose a risk to the environment if not handled correctly. This location also included stacks of railroad ties that may be leaking creosol onto the soil.

There were two locations along US-95 within the project scan area that had meth lab related incidences (ISP 2005). Meth labs contain hazardous materials and it will be necessary to verify what level of cleanup has been completed prior to any impacts to the property (Denbleyder, pers. com., 2005). Because these locations are in a mobile home park, the structures may no longer be on the premises but the soils may be contaminated.

Latah County has a transfer station, a non-municipal solid waste landfill, a household hazardous waste facility, and a compost program. The location is on SH-8 about five miles east of Moscow, which is outside the project scan area. The County does not have any private solid waste sites. According to the Latah County Solid Waste Department there are no known problems with hazardous materials in this area (Bashaw, pers. comm. 2005).

## RECOMMENDATIONS

The following is a list of recommendations to minimize potential impacts to the project by the hazardous materials sites. Contaminated containers and soils will need to be identified, removed, contained, and shipped to the appropriate receiving locations in accordance with EPA and DEQ guidelines.

- Propane tanks – portable; can be relocated; test soils for potential residue
- AST – portable; follow proper transport guidelines and test soils for petroleum contamination
- UST – removal more involved; follow DEQ guidelines for UST location closures which include, but are not limited to, soil testing for contamination and proper shipment of tanks and soils
- Drums – test the contents prior to removal from the site to ensure proper transport and disposal
- Abandoned tanks – test the contents prior to removal from the site to ensure proper transport and disposal
- Methamphetamine laboratory locations – verify that the structure currently at the address is the one listed in the police report; test soils for residue from methamphetamine production in case of contamination to provide for proper removal and disposal of the hazardous material

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## FEDERAL RECORDS

### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

### DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

### CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

### CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

### LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

### RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

### US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

### HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### WA CSCSL: Confirmed and Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

### WA CSCSL NFA: Confirmed and Contaminated Sites - No Further Action

The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

### EDR PROPRIETARY RECORDS

#### Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

### OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

#### NY MANIFEST: Facility and Manifest Data

Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

**Oil/Gas Pipelines:** This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.
